

Book Information

Permaculture Plants A Selection

By Jeff Nugent and Julia Boniface

Permaculture Plants: A Selection is indispensable for growers and designers working in sub-tropical and warm temperate/arid climates, and also includes some cool-climate tolerant species. *Permaculture Plants: A Selection* details hundreds of common and unusual edible, medicinal and useful plants.

Permaculture Plants: A Selection is indexed extensively to facilitate cross-referencing and is divided into sections covering:

Pioneer plants: whose main role is to act as nurse plants to other species, as well as having useful products and properties of their own;

Nuts and Fruits: species whose main product is edible, but which usually possess other useful qualities;

Other Utility Plants: including species which do not fit easily into the first sections, for example timber or animal fodder species;

Utility Lists: which comprise species serving a particular function, such as fire retardant or bee forage species;

Water Plants and Difficult Sites: categorised according to the particular sites the plants are adapted to.

ABOUT THE AUTHORS:

Jeff Nugent was born in Perth, Western Australia and moved to Nannup in 1975. He is a founding member of the Sustainable Agricultural Research Institute (SARI). He holds a degree in permaculture. Julia Boniface moved to Nannup, Western Australia, in 1989, after completing a degree in agriculture at London University. She held a certificate in permaculture design and worked as a permaculture designer and lecturer with SARI until she passed away.
